

# TEMPAPER®

SELF ADHESIVE. REPOSITIONABLE. TEMPORARY. WALLPAPER.

## A step by step guide to installing Tempaper as a DIY project with ease.

**Suggested Tools:** tape measure, squeegee, ruler to cut even lines and an exacto blade or razor blade to cut the product. Two people are recommended for installation. One guiding the paper at the top of the surface and one aligning the design repeat towards the bottom of the panel. Please use caution when handling sharp blades.

### Wallpaper Preparation:

Tempaper is recommended for smooth surfaces that are in good condition. It may be applied to any primed and painted surface such as walls, doors, and interiors. It is recommended that you apply Tempaper to surfaces that have been painted with an eggshell, satin or semi-gloss finish. It is also recommended that you avoid exposing Tempaper to prolonged heat from direct light sources. Tempaper may not stick to all surfaces. Test a small non exposed area to check for adhesiveness prior to applying to a full wall.

### Steps to Apply:

1. Measure the height and width of your wall, this will determine how much Tempaper you will need. One roll will cover approximately 56 sq. ft. or an 8 ft. x 7 ft. surface.
2. Pre-cut panels to the height and width of your surface aligning the design from panel to panel. Leave 2" - 3" of extra material to trim around baseboard.
3. Peel back 3 - 4 ft. of the backing. Begin application from the top edge against the ceiling, and butting wall if applicable.
4. Use a squeegee to smooth out any air pockets. Start from the middle of the piece you are smoothing and guide the air out to the sides. Please do not pull too hard on the product. Tempaper is a phthalate free vinyl and can stretch causing the pattern to not align.
5. Trim with razor around molding and such if need be.

### Step to Remove:

1. Starting with any corner firmly peel up or down slowly parallel to the surface. Tempaper has been tested on and successfully removed from various surface types and conditions. Tempaper may not stick to all surfaces. LolliProps Inc. may not be held responsible for damaged surfaces or for difficulty of removal.
