Please call **800.606.6387** for replacements.

tools required

Phillips head screwdriver

power drill
(for pilot holes only)

level

components

1 - shelf assembly

wall mounting assembly

For safe mounting, it is essential to use wall anchors appropriate to your wall type (i.e. plaster, drywall, concrete, etc.). Mount to wood studs whenever possible.

NOTE: If you are unsure about your wall type or what mounting method you should use, consult a qualified professional or your local hardware store.

A) Determine desired orientation of shelf assembly and final location of unit. Using a level, position **shelf assembly** onto wall until it is **level**. Mark upper 4 hole positions on the wall.

B) Drill a pilot hole in the wall stud. If the wall stud is not available, drill a hole in the wall that is slightly smaller in diameter than the anchor. Insert 4 **plastic anchors** into holes. Using a screwdriver, fasten **plastic anchors** until the flange of the anchor is flush with the wall.

C) Insert 4 **screws** through **shelf assembly** and into **plastic anchors** in the wall as shown, using a screwdriver.

Wall mounting is now complete.

cleaning & care

Clean surfaces with a dry or damp soft cloth. Do not use abrasive cleaners.
Note: This item is able to support up to a total of 160 lbs evenly distributed.
